

Master Data Functionality

Master Data Management (MDM) Solution

Manage Your Critical Data Effectively

Comidor's MDM functionality enables organisations to manage their data efficiently and effectively.

Whether it's customer data, product data, supplier data or asset data, companies need to ensure this is synchronised which enables a single source of the truth (SSOT) or as it often referred to, a Golden Record.

The Rock MDM solution on the Comidor platform ensures uniformity, accuracy, stewardship, consistency and accountability of an enterprise's official shared master data assets.

Advantages of Effective MDM

- ✓ better customer knowledge
- ✓ improved risk management
- ✓ accurate reporting
- ✓ improved regulatory compliance
- ✓ enhanced security and data privacy
- ✓ ability to detect fraud
- ✓ reduced time and costs
